

UP Lights

An Up light is a type of outdoor lighting that shines upward from the ground. Up light is not just for an architectural piece, it is also for landscape, and special features. From die cast aluminium body, this fixture is designed for years of use. You can install it in the ground, whether it's soil or gravel. The LED is high efficient and promises considerable energy saving. The LED source is "just" a plus which ensures high standard levels of professionalism and "green" character. Do you need in-ground lighting, we have the best solution for your specific application like pathways, parks, gardens.
